

Lab 1

Title:

HOW TO CREATE LOGO DESIGN IN MACROMEDIA
FREEHAND MX.

Introduction :-

Logo design is the combination of Image and graphics in multimedia. An image is a spatial representation of an object, in an object, in a two-dimensional or three dimensional scene. Logo can be combination of different shapes too. A good logo should also have good typography. A image can be in formats like JPEG, GIF, PNG, etc.

Graphics formats are specified through graphics primitives and their attributes i.e either bitmap or pixmap.

Bitmap is an array of pixel value that map one by one to pixels on the screen & pixmap is a more general term describing a multiple bit-per pixel image. There are mainly two types of graphics:

Raster Graphics: composed of pixels

Vector Graphics: mathematical representation such as line

Objectives :-

- To be able to design a simple logo using macromedia freehand mx.
- To be familiar with the tools in micromedia free-hand.

materials :-

- Software used :- macromedia freehand mx

* Steps :-

- 1) First, use the Ellipse tools to draw the circle holding shift and alt.
- 2) Duplicate the circle & reduce its size & align it at the center of big circle.
- 3) Duplicate the inner circle.

- > choose the polygon tools & reduce number of slides to 3 to make a triangle.
- > Place the triangle inside the inner circle.
- > Duplicate the triangle & rotate 180°
- > Use both triangle to form a star like shape.
- > In the duplicate inner circle, write a text and align to it.
- > The text should wrap around the inner circle.
- > Use polygon tool and choose star to make stars in the Logo.
- > Use the font "Wingdings" and press shift + 7 to draw a book and place it in the center of the logo.

Shortcut Logo Keys :-

- i) Control + Shift + D → Duplicate
It duplicates the chosen objects.
- ii) Control + alt + A → Align
Open a align window to align the object.
- iii) Control + Shift + < → make text small
Decrease the font size
- iv) Control + Shift + > → make text big
Increase the font size
- v) Control + Shift + Y
Aligns text along the circle.

Tools Used

- i) Ellipse → To draw circles.
- ii) Polygon → To draw triangles and stars
- iii) Star Text → To write text on the logo
- iv) Rotate → To rotate the objects
- v) Colors → Used to color the shapes.
- vi) Rulers → To align the objects correctly.

* Discussion or Analysis

Macromedia Freehand MX is a great application to design logo. but it is not as easy as it seems. The application is hard to use and requires time to learn the tools to design. We can design a simple to complex design using Macromedia Freehand MX. Overall, it is a great application for designing.

* Conclusions

Logo can be designed using Macromedia Freehand MX. The tools present in the application makes it easy to design a simple logo.
