

Title :- Bouncing / moving Ball in curve using macromedia director

Introduction :-

Macromedia Director (now Adobe Director) is a multimedia authoring tools used to create interactive applications and animations. It supports vector graphics, 3D interactivity and allows for the development of stand alone executable applications called projectors. By integrating elements such as audio, video text and fonts, it helps create engaging content.

A key-animation technique in Macromedia Director is tweening motion. where is between frames and generated between keyframes for smooth movement. This includes:

- Immediate Interpolation: Direct movement between keyframes without easily.
- Keyframes: Defining the start and end positions of an animations.
- In between process: Automatically generated frames using creating seamless transitions.
- Input process: manually placing keyframes and defining motion paths.

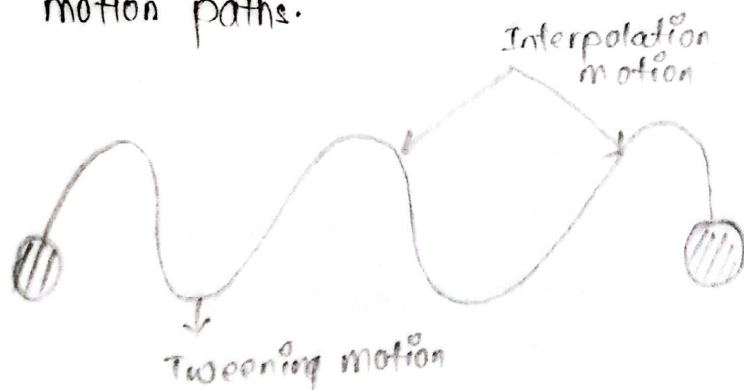

fig. Ball in curved motions demonstrating tweening, interpolation

Objective :-

- To create an engaging multimedia content integrating audio, text and fonts.
- To develop an animation simulating a bouncing ball.

materials :-

Software used macromedia Director mx.

steps to create a Bouncing Ball Animation :-

1. Open a macromedia Director mx and create new project.
2. Select the filled ellipse tool from the tool section to draw a ball.
3. Use properly inspector to choose ball colors.
4. Adjust a ball size as needed.
5. Set a specific time on the scoretime line.
6. move the ball downward.
7. Advance the timeline by 10 steps.
8. move the ball upward to simulate bouncing.
9. Repeat 5 & 8 until the desired animation is achieved.
10. Play and review the animation.

Shortcut Keys :-

- ctrl + '+' = Zoom In
- ctrl + '-' = Zoom Out
- ctrl + N = New file
- ctrl + Z = Undo

Key windows in macromedia Director

- Property Inspector : Displays component details for editing.
- Tools panels : provides various tools for different functionalities.
- Score Panel : manages the animation timeline
- Stage : The workspace where animation are created & edited.

Tools Used :-

Arrow Tools : selects & moves objects . filled et.

Filled ellipse tools : create circle or ellipse shapes like ball.

Discussion & Analysis :-

Macromedia Director is an effective tools for animation and multimedia content creation. By using keyframes, tweening and interpolation user can create smooth & professional animation, such as bouncing ball. Different software, such

as bouncing ball. Different software version provide enhanced features improving the creative process.

Conclusion :-

macromedia Director facilitates animation development, through techniques like tweening motions and interpolation. Understanding keyframes in between process and input processes, allow users to create professional grade animation efficiently.

The bouncing ball animation exemplifies - fundamental animation principles in actions.
